

MUHAMMAD FARIS BIN MOHD EMRAN

Bandar Baru Bangi, Selangor | farisemran03@gmail.com | +60-1137905033
[linkedin.com/in/farisemran](https://www.linkedin.com/in/farisemran)

Career Objective

AI Research Officer with a background in Data Analytics and hands-on experience in AI/ML, computer vision, video analytics, and intelligent systems development. Proficient in Python, SQL, NVIDIA DeepStream, and AI model development, with practical experience in developing, fine-tuning, integrating, and deploying AI solutions for real-world applications. Seeking to leverage my technical and research experience to develop scalable, edge AI solutions and contribute to advanced AI R&D initiatives.

Education

Universiti Malaysia Terengganu

October 2022 – March 2026

- Bachelor of Science (Data Analytics) with Honours | CGPA: 3.39 | MUET: Band 4.5
- Database, Data Structure and Algorithm, Introduction to Machine Learning

STEM Foundation Center, UMT

July 2021 – July 2022

- Foundation in STEM | CGPA : 3.46
- Mathematics, Engineering, Physics, Chemistry, Biology

Professional Experience

MIMOS Berhad

April 2026 – Present

AI Vision Lab (*Research Officer*)

(6 Months)

- Developed and enhanced Mi-PlateIQ, an AI-powered licence plate recognition system, by integrating and fine-tuning multiple AI models for accurate recognition of Malaysian number plates, utilising NVIDIA AI technologies and DeepStream for real-time video analytics and deployment.
- Represented MIMOS Berhad at internal and external technology exhibitions, showcasing Mi-PlateIQ and engaging with industry professionals and stakeholders to promote MIMOS's AI, computer vision and video analytics innovations.
- Supported the production release and deployment of a mobile application, managing application builds and release packages using Expo and publishing the application across the Apple App Store, Google Play Store, and Huawei AppGallery.

MIMOS Berhad

March 2025 – March 2026

Quality Process & Framework (*Industrial Trainee*)

(1 Year)

- Supported end-to-end preparation for ISO 56001:2024 certification, managing audit evidence, document control, and logistics for Stage 1 and Stage 2 audits by SIRIM QAS, contributing to MIMOS becoming the first certified organization in Malaysia.
- Built interactive Excel dashboards to visualize OFI and NCR status, enabling senior management to reduce audit preparation gaps before ISO 56001 Stage 2 certification.
- Configured and fine-tuned the RDCI Agent using Microsoft Copilot Studio, improving internal knowledge retrieval accuracy through structured prompt engineering.

- Cleaned, validated, and structured client datasets in Microsoft Excel, identifying missing values, duplicates, outliers, and data quality issues.
- Prepared business datasets for analysis by aligning variables with reporting and operational requirements.
- Served as event emcee for the launch of a new Bubbles O2 production facility, coordinating program flow and engaging stakeholders.

Skills

Tools	:Microsoft Excel, Power BI, VS Code, Microsoft Copilot Studio, SharePoint, Tableau
Programming	:Python, SQL (MySQL/PostgreSQL) , HTML
Analytics	:Data Visualization, Audit Reporting, KPI Tracking, Cross-department data consolidation

Industrial Projects

MIMOS Integrated Quality System (Mi-IQS)

Django

- **Engineering & Deployment:** Developed a full-stack quality management system using the Django framework and successfully deployed the application on an Ubuntu 22.04 Virtual Machine to centralize audit evidence and corporate quality records.
- **System Governance:** Implemented Role-Based Access Control (RBAC) and optimized UI/UX for "Dashboard" modules to improve data readability and ensure secure departmental data handling.

RDCI AI Agent

Microsoft Copilot Studio

- **AI Implementation:** Engineered and fine-tuned a specialized Generative AI Agent using Microsoft Copilot Studio, utilizing prompt engineering to automate the retrieval of SOP, policies and technical documentation for **Research, Development, Commercialization, Innovation (RDCI)**.
- Coordinated the RDCI AI Agent launch, conducted live staff demonstrations, and resolved deployment issues related to SharePoint embedding.

University Projects

Blood Bank Management System

SQL

- Developed and executed complex SQL queries for database creation, data insertion, updating records, and data deletion.
- Implemented normalization (1NF to 3NF) to ensure data integrity and reduce redundancy across multiple entities.

Heart Diseases Prediction SVM Model

PYTHON

- Implemented various SVM kernels (linear, polynomial, RBF) and tuned hyperparameters to optimize model performance, achieving a train accuracy of up to 74.29% and a test accuracy of 63.33%.
- Presented insights through visualizations that highlighted key differences in heart disease presence.

Solar Energy Efficiency Through Air Quality Analysis

PYTHON

- Participated in a group of 4 with 1 advisor in Malaysia Data Innovation Talent X DOSM Datathon 2024.
- Implemented extra tree regressor algorithm for the predictive model, accomplished R^2 score of 0.6457 and a MAPE of 47.67.
- Designed interactive dashboard for the trained model using Microsoft PowerBI.

Extra-curricular

ExcelLearn with Python Workshop ***Program Director***

Universiti Malaysia Terengganu

- Planned and managed to carry out the 2-days programme with my assigned team members.
- Engage with the speaker for the content details of the workshop.
- Supported delivery of hands-on Excel and Python sessions by trainer to ensure participant understanding.

International Funmathics with Us ***Committee Member***

Narathiwat, Thailand

- Committed as one of the facilitators that conduct activities at the checkpoint.
- Managed scheduling with drivers to ensure timely smooth transit from the hostel to the event venue.
- Facilitated the transportation of all participants, contributing to the overall success of the event.
